

eCapture

Browser Based Remote Image Capture

With seamless interfaces to your system and real-time management reporting, J&B's scan and send approach will optimize branch workflow and case management while reducing costs, improving float and minimizing risk.

PRIMARY SOLUTIONS

Remote Image Capture

J&B Software's Remote Image Capture Solution quickly captures document images at one or more remote locations using small branch capture scanning devices, which then interfaces with payment processing and accounting systems and supplies real-time information to operations and management. By adopting eCapture, your organization will benefit with an improvement in float time and a reduction in paper-handling risk and infrastructure costs.

The Technology

The solution consists of a browser based client application located at the branches and a central server located at the central processing center. Data and images are captured at remote locations using either desktop check scanners or TWAIN compatible scanners that can scan checks, coupons and full pages or a combination of the two. MICR, OCR, Barcode recognition will either be done at the client or at the server depending on the type of client and scanners used. The software will also perform CAR and Image Quality Assurance.

eCapture can transmit all types of transactions and document sizes, thus minimizing transaction costs and human error. Data is sent real-time to the central processing facility that provides status notification and reports to verify a deposit and then feeds information to your legacy accounting or other systems. All reporting, configuration, user management and data-storage is centralized at the server location at the central processing facility.

Why J&B Software?

J&B Software revolutionized the image-based payment processing industry. Today we provide market-leading automated payments and transaction processing and management systems to over 165 industry-leading companies and government agencies. Our industry expertise and experience working with the leading financial, commercial, and public sector companies provides the flexibility to accommodate ARC, Check 21, BOC, WEB/TEL, image exchange and paper processing or a mixture of all clearing channels with a single solution.

With more than 25 years of experience, J&B Software and its 400 employees are committed to improving our customers' operational effectiveness and profitability. We welcome the opportunity to talk with you to begin planning an electronic check strategy that meets your specific requirements.
