

CHECKREVIEW

Breakthrough Security Feature

To Help Reduce Remote Deposit Check Fraud

CheckReview™ is our new, proprietary technology that helps financial institutions better identify potential check fraud. This added feature allows financial institutions greater control when reviewing digital images of checks submitted for deposit via remote and mobile deposit.

With traditional RDC, customers submit checks for deposit using a desktop check scanner or a camera-equipped smart phone. Until now, financial institutions have not able to view and validate the digital image of the check in real time. Instead, images were available for review only after the check had been deposited.

Cachet's CheckReview™ changes all that. With CheckReview™, financial institutions can now approve or reject a scanned check before it is deposited, fundamentally changing the way financial institutions can manage their fraud risk with remote deposit capture. The new feature can be customized for each financial institution using it. For example, some institutions might choose to use this feature for its newer customers or for checks over a certain dollar amount.

Best of all, CheckReview™ can be added to all of Cachet's RDC Select™ products, Select Business Mac & Windows - our commercial solutions, and Select Mobile - our consumer mobile deposit solution.

Before CheckReview:

A customer submits a check for deposit. The financial institution receives a copy of the image at the end of the process after the check has been deposited.

With CheckReview:

A customer submits a check for deposit. Before the check is deposited, the financial institution receives a high quality, 3-D image to review and approve. Once approved, the deposit process is finalized.

RDC is not just for PCs™
