

Remote Deposit Capture for Mac Operating Systems

With RDC Select's™ Mac platform, financial institutions are able to offer their valued customers all the advantages of remote deposit capture without technology restrictions.

RDC is not just for PCs™
The industry's premier
Mac platform for RDC

Today most financial institutions only offer their remote deposit capture(RDC) solution to PC users but with Apple's growing popularity there is a large segment of the RDC marketplace that is being underserved. At Cachet, we strive to be on the cutting edge of technology and provide our customers with the most complete RDC solution available today. We believe RDC should be available to all users and that is why we created our industry-leading **patent-pending** RDC Select™ platform for the Mac operating systems.

Bottom-line Results

The software behind Cachet's RDC Select™ Mac Platform is one of the most powerful IT solutions in the industry today. Developed and enhanced over the last 10 years, our software solution is currently being used by many of the largest financial institutions in the world. Our Web-based solution allows financial institutions greater freedom and flexibility when providing RDC to their customers. Not only is RDC Select™ more efficient for end users, it is also more cost-effective and requires less internal support from within financial institutions.

Save Time and Money

The proprietary software solution enables merchants to process checks in a single pass, validate their authenticity and forward them to financial institutions for deposit without a single paper check ever leaving your office. In addition, the software also:

- ◆ Gives users the functionality of five modules in one (scan, balance, transmit, archive and research)
- ◆ Takes advantage of cutting-edge technology like CAR/LAR to automate the balancing process and limit the need for manual data entry
- ◆ Includes advanced features such as intelligent balancing, image quality assurance (IQA) and duplicate item detection
- ◆ Generates X9.37 image exchange files, the file format certified by the Federal Reserve Bank for electronic check presentment

Simple. Safe. Secure.

We've eliminated the need for costly infrastructure and back-office processes. We've built RDC Select™ to meet and exceed the needs and expectations of our clients. The software behind RDC Select™ has been continually enhanced and improved to meet the rigorous industry specifications and requirements of financial institutions of all sizes. This software has been deployed remotely to thousands of end users on behalf of numerous financial institutions across the U.S. So whether you have a Mac or PC, Cachet has a solution to fit your needs.
